

Year 2 Term 2

English

This term, we will dive into the world of information texts. We will be learning about text structure and language features. We will be creating our own information texts using interesting facts and exciting new vocabulary. There will be a variety of information texts to read and discuss, and we will practise our comprehension skills by answering different types of questions. Our sentences will continue to improve as we immerse ourselves in lessons that allow us to practise using correct punctuation and spelling.

Mathematics

This term, we will be learning about addition and subtraction. We will look at effective mental strategies to solve simple number facts, as well as ways to add and subtract 2 digit numbers. We will be counting collections of Australian notes and coins, as well as investigating months of the year, seasons and calendars.

Science

We will become scientists of the natural world as we investigate the life cycles of the beautiful creatures of Earth. We will explore the different characteristics of each stage of the life cycle and use the information to draw an informative flowchart with labelled diagrams to show our understanding.

HASS

Our investigation into places we love continues this term as we delve into the lives of animals who are held in captivity in zoos. We will look at the way animals are treated in zoos and how this has changed over time. We will explore the important features of zoos today and explain why these features need to be preserved.

Media Arts

Exciting times lay ahead as we use Book Creator skills to create a 5 page book that will teach others about the life cycle of the bee. We will use our knowledge of the different media arts elements, such as colour, font and images, to create an impressive digital book. You won't want to miss it!

From The Year 2 Team:

Mrs Holt

Mrs Durrant

Mrs Hansen

Mrs Birchall

Mrs Desaubin

Mrs Christesen

Mr Maguire

Mrs Jason
